Dextra

www.dextragroup.com

Vision

To be a global leader in engineered solutions for the construction industry, providing high added value on quality, safety, and service.

Mission

To exceed customer satisfaction, stakeholder expectations, and contribute safely to a sustainable future by committing to the highest standards of performance and results with creativity, integrity, reliability, environmental and social responsibility.

Values

- Stakeholders' satisfaction
- Agile creativity
- Transparent integrity
- Environmental & social responsibility
- Passion and commitment

About us

Established 40 years ago in 1983, Dextra is a leading manufacturer and distributor of engineered construction products for the building and civil industries.

For over fifteen years, Dextra has been selling a comprehensive range of steel bar systems suitable for a variety of concrete, ground engineering and structural steelwork applications.

The combination of our in-house engineering expertise and design capability with modern manufacturing facilities has allowed us to supply to major construction projects such as Boubyan Seaport in Kuwait (6,000 tons of tie bars and accessories), Suvarnabhumi Airport in Thailand (2,000 tons of tension rods), and Sheikh Jaber Causeway-Doha Link in Kuwait (1,750 tons of post tensioning bars).

Thanks to our ISO-certified production facilities, quality systems, and in-house laboratories, Dextra teams are able to control and maintain a high level of quality in all system components, ensuring full compliance with project specifications and customer satisfaction.

Our expertise

DETERMINATION OF THE RIGHT SOLUTION

Dextra can guide you step-by-step in selecting the most appropriate and cost effective solution for your project. Our guidance is based on 40 years of handling large-scale, complex projects.

SYSTEM OPTIMIZATION & CUSTOMIZATION

Dextra has developed a comprehensive standard component range over the years, allowing for rapid adjustment and customization of our products for a genuinely optimum project solution. Our team will support in the selection and drawing of your systems.

For designers, Dextra offers full technical documentation as well as design/ drafting software components. These can be found in the download section of www.dextragroup.com.

TOTAL CONTROL OVER MANUFACTURING

Dextra has many years of expertise developing and producing its own products. In addition to our own facilities and ISO-certified quality assurance processes, all of our suppliers are audited on a regular basis by our team of engineers to ensure quality compliance and ongoing improvement. Inspections are performed in our own factory or, if necessary, in partner laboratories.

PACKING & SHIPPING

Dextra prides itself to only provide the best packing solution for all exported goods to ensure safe shipping and flawless deliveries. Each bar system component is individually marked to allow easy and quick identification and save time upon installation.

When speed is of the essence, we can also provide acceleration methods to expedite our solutions and avoid site delays.

ON-SITE SERVICE & SUPPORT

We believe that the product delivery is merely the beginning of our customers' journey. Dextra worldwide professionals are also able to accompany you through each step of the onsite installation process until you are completely satistifed with our solutions.

Wheatstone LNG Terminal, Australia

MARINE
TIE BARS

Port Autonome de Pointe Noire, Republic of Congo

About our range

Tie Bars are used in port and harbour construction to anchor waterfront structures. Dextra's unique range covers various steel grades from 355 to 700 N/mm² in yield strength, and thread diameter up to 160 mm.

Different standard designs of fixed and articulated joint are available such as swivel nuts, captive nuts and ball cages, to ensure the project requirements are fully accommodated. Anchorages can be made compatible with all sheet pile profiles, combi walls and concrete diaphragm walls.

For projects using sheet piles, Dextra can also design and prefabricate waling beam systems with waling bolts to provide a complete anchoring system which will ensure full compatibility and consistency with our tie bar systems.

Typical applications

- Harbors
- Wharves
- Jetties
- River embankments
- Container terminals
- Oil & Gas terminals

Product benefits

Various articulation solutions with captive nut, swivel nut, ball cage, T-plate, angle seating, and/or pad-eye ends.

- Ductile design.
- Quick installation.
- Full range of accessories and corrosion protection options available to suit all project requirements.
- Post-tensioning applicable.

Product features

- Available in steel grades 355/510, 500/660, 700/900 N/mm².
- Thread diameter range from M48 to M162.
- Rolled threads.

Corrosion protection / surface finish

Various corrosion protection options are available such as bituminous tape, epoxy coating, sacrificial thickness depending on the project design and requirements.

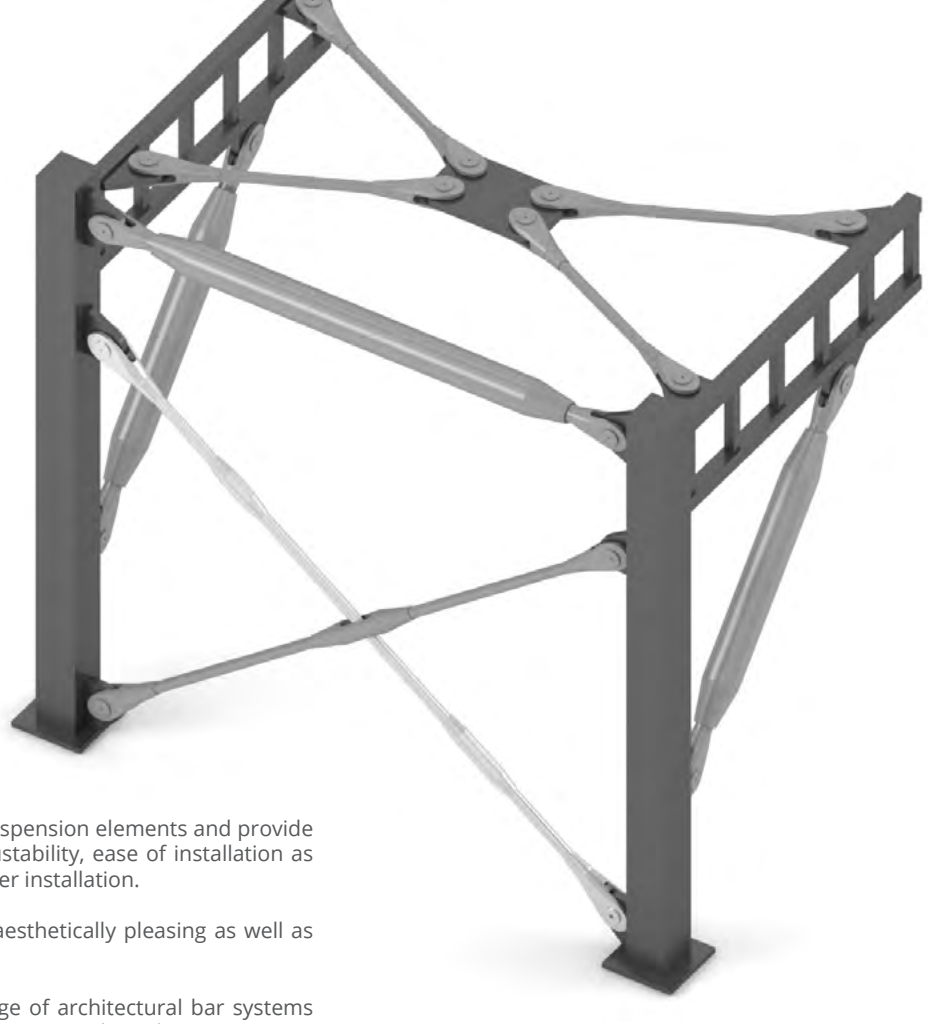
ARCHITECTURAL
BAR SYSTEMS

Valenciennes Bowstring, France



About our range

Tension rods typically act as bracing or suspension elements and provide the benefits of high strength, length adjustability, ease of installation as well as the ability to be post-tensioned after installation.

Dextra tension rods are designed to be aesthetically pleasing as well as functional.

Compression struts complement the range of architectural bar systems and are used when structural members are required to take compression loads as well as having the benefits of installation and aesthetic appeal associated with the Dextra tension rod system.

Featuring a wide range of sizes and accessories in various steel grades and in both carbon and stainless steel with various finishes, Dextra tension rods and compression struts meet the engineering and design requirements of consultants and architects alike.

Typical applications

- Roof support systems
- Canopies roof support systems
- Truss bracing systems
- Hanging floors
- Road and pedestrian bridges
- Temporary stays and braces

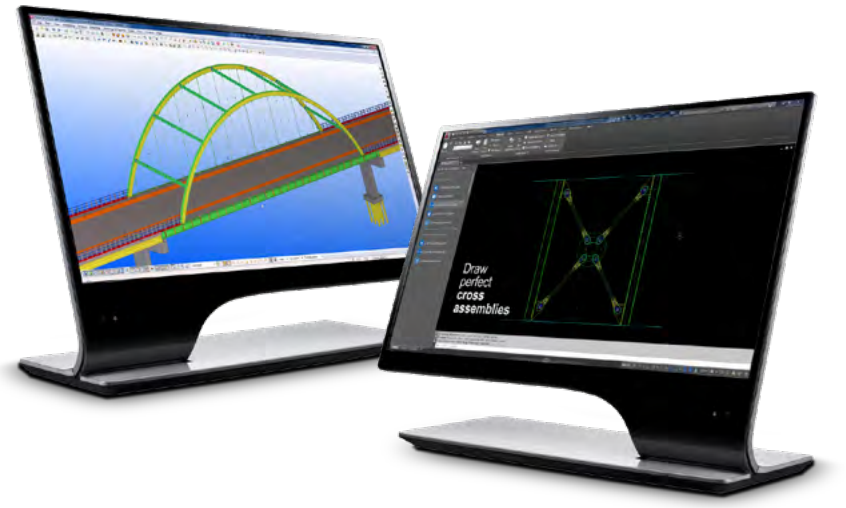
CAD & BIM

Structures incorporating architectural tension rod systems are often complex.

To aid in the design, detailing, and installation, Dextra offers automated drawing components in AutoCAD, Revit, and Tekla, available for download on our website.

www.dextragroup.com

AUTODESK AUTOCAD AUTODESK REVIT Tekla



Carbon steel tension rods

Cylingas Gas Tanks, UAE

About our carbon steel range

- Available in high strength grades, allowing the use of smaller diameters to achieve the same tension capacity as larger diameter mild steel tension bars.
- In situ length adjustment can be achieved by rotation of the bar into the forks and/or at each turnbuckle along the tendon.
- Turnbuckles also allow for the application of a preload, making for example self-weight sagging corrections easier.

Design references

EN 1993 (Eurocode 3)

Product features

- Available in steel grades 460, 520 & 700 N/mm².
- Thread diameter range from M16 to M133.
- Rolled threads.

Surface finish

Carbon steel tension rods can either be delivered plain, painted or galvanized. If required, they can also be delivered unpainted (plain black steel surface).

Accessories

Forks and Spades		Forks and spades are designed to be connected to grade S355 gusset plates.
Couplers		Couplers are used to connect individual lengths of bar, usually to achieve a greater tendon length than is possible with a single bar.
Turnbuckles		Turnbuckles are used to connect bars and adjust the overall tendon length.
Cross Turnbuckles		Cross-turnbuckles allow two tendons to cross each other in the same plan.
Lock covers		Lock covers are used to cover the exposed thread of the bar and prevent the relative rotation of components.

About our stainless steel range

When the requirements for pleasing aesthetics or corrosion protection are particularly high, stainless steel tension rods are the perfect solution.

Product features

- Available in stainless steel grade S460 & S520.
- Thread diameter range M16 to M98.
- Rolled threads.

Compression struts

Midfield Terminal at Abu Dhabi International Airport, UAE

Typical applications

- Roof support systems.
- Truss bracing systems.
- Face bracing systems.

Design references

EN 1993 (Eurocode 3)

Product features

- Struts are available in two alternative designs:
  - Architectural
    (with long cone and smoother lines).
  - Non-architectural.
- Carbon steel tube (Circular Hollow Section) range from 42mm to 324mm.
- Thread diameter range from M16 to M103.
- Length adjustment of the assembly possible at each fork end.

Non-architectural strut

Architectural strut

Surface finish

Compression struts can either be delivered plain, painted or galvanized. If required, they can also be delivered unpainted (plain black steel surface).

Model selection

CHS (circular hollow section) compression struts range from M16 to M103 and are available in grade 355.

The total compression capacity is limited by the resitance to buckling (which depends on the size of the CHS and pin-to-pin length).

Please refer to the technical datasheet available on www.dextragroup.com for more information about strut selection.

Hyderabad Metro, India

POST TENSIONING **BAR SYSTEMS**

Jahra Road, Kuwait

About our range

Post tensioning bars are used for **permanent works** such as connecting various segments of bridge structures, shear keys for seismic resistance, connection of segments or girders and the reinforcement of piers.

They are also used for **temporary works** such as the anchoring of temporary steel frame supports, lifting bars for segment launching trusses, and stitching bridge segments.

The bars systems need to have defined properties and characteristics in order for the structure to be designed correctly and the bars appropriately tensioned.

The Dextra post-tensioning range features **smooth bars**, **fully threaded bars**, and **CR Bar 1080**, with a full range of accessories.

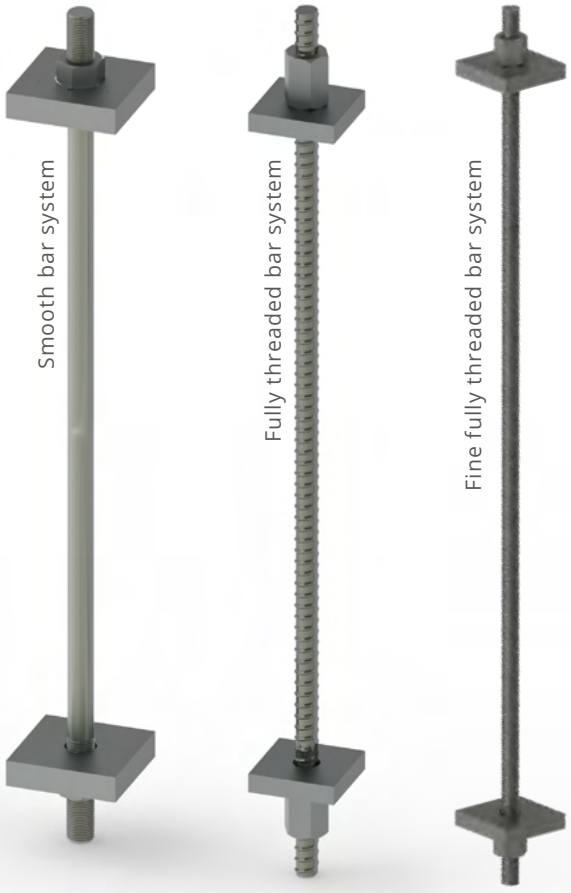
The services of a fully dedicated design team are available to provide engineering support.

Design references

- AASHTO
- Eurocode 2

Typical applications

- Post-tensioning of concrete structures.
- Temporary bracing / Temporary post-tensioning.
- Heavy lifting.
- Seismic restrainer system.
- Hold down for steel structure, wind turbine.
- Structural steel frame ties.
- Bridge segment connections.
- Bridge segment continuity tendons.
- Pre-stressed concrete.
- Pile-testing.



Corrosion protection

Various corrosion protection measures are available depending on whether the tendon is temporary, permanent, bonded, un-bonded and with or without free un-bonded length.

Protection can be achieved by the application of a heat shrink sleeve, grease, paint, grout, or a combination of these.

The smooth bars for shear key applications are normally supplied in a HDPE tube injected with grease and complete with specially designed accessories.

Smooth bar range

Product features

- Diameter range from 33mm to 103mm.
- Three steel grades available.
  - Gr 835/1030
  - Gr 930/1080
  - Gr 1050/1200
- Rolled threads (obtained with cold plastic deformation of the metal between two dies).

Special application: Shear key & hold down bar systems

- Shear key and hold down bars are a special application of PT smooth bar systems where an assembly acts as a permanent seismic restrainer for the connection of precast elements for elevated metro road for instance.

- Shear key bar systems and hold down bar systems are available with a full range of accessories for grade 1050/1200 and in four diameters: 37/M39, 43/M45, 45/M48 and 49/M52.

Product benefits

- High impact resistance.
- Smaller pitch allows finer adjustment and brings less draw-in loss.
- Full range of accessories for specific applications.
- High fatigue performance.

Causeway Across Kuwait Bay (Jaber Causeway), Kuwait

Dextra smooth PT bar systems in action

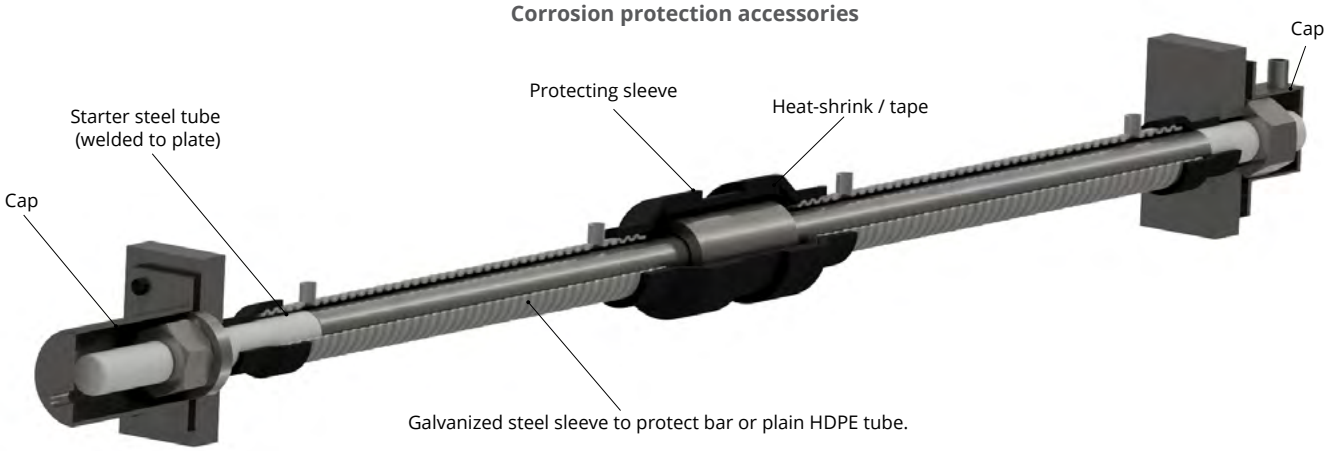
High-performance post tensioning solution for Jaber Causeway, the world's longest sea link

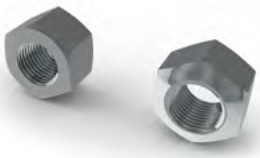
Dextra smooth PT bar grade 835/1030 were used all along the sea link for the connection of the precast girders.

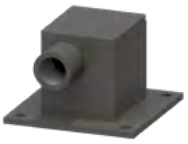
In addition, high performance PT bars in Grade 1050/1200 were used to anchor the main steel pylons. These were delivered complete with full corrosion protection accessories.

System accessories

Corrosion protection accessories



Coupler system	Nuts	Bearing plates	Washers	Caps
				




Fully threaded range

Product features

- Diameter range from 25 mm to 50 mm.
- Two steel grades available:
  - 830/1030.
  - 930/1080.
- Continuous hot rolled thread.

Product benefits

- Re-usable.
- Cuttable at site.
- Continuous thread makes connection possible at any point.
- Large pitch especially suitable for fast installation and temporary applications.
- Re-tensioning possible without any damage.
- Full range of accessories, including corrosion protection accessories, also supplied by Dextra.

Jahra Road, Kuwait

Dextra fully threaded bar systems in action

For the Jahra Road project in Kuwait, Dextra supplied reusable fully threaded bar systems in diameters 36mm & 50mm, grade 930/1080. The high-grade bars were used for the heavy lifting of precast girders, temporary support of the concrete structures, and temporary bracing of supporting structure.

Dextra CR Bar 1080 range

High-tensile CR Bar 1080 is quenched and tempered to obtain their specified properties and provided with cold-rolled thread. Specifically designed to facilitate mainly easier installation, continuous thread for possible connections at any point, and lesser lock-off loss.

Typically used for permanent or temporary application for the connection between steel and concrete elements or concrete to concrete elements or steel to steel elements. It has high impact resistance and high fatigue performance that allows cost-efficient size selection from OD 26.5mm to OD 75mm. Accessories for specific applications are made available upon request.

Product features

- Cold-rolled CR Bar 1080 (Quenched & Tempered)
- Diameter range available from 26.5mm to 75mm
- Bar grade: 950/1080
- Triangular ISO metric thread
- Pitch 6mm for ≤ OD40mm and 8mm for ≥ OD47mm
- Length up to maximum 11.8m
- Complete accessory range available: Couplers, washers, nuts & plates
- All accessories are designed to exceed the load performance of the bar

Product benefits

- Re-usable* / Re-tensioning
- Available in standard lengths of 3m, 5.8m, 9m, 11,8m. Custom lengths available upon request.
- Cuttable at the site
- Continuous thread makes connection possible at any point
- Contact Dextra for specific requests (made to order accessories)
- The services of a fully dedicated design team are available to provide engineering support

*Components can be re-used/re-tensioned providing that the actual conditions of each component at the site are guaranteed to have the same condition as its first use. Subject to Engineer's validation and approval at the site.

Dextra CR Bar 1080 systems load table

Bar Nominal Diameter	Nominal Thread Size	Pitch	Cross-section Area	Linear Weight	Grade 950/1080	
(mm)	(mm)	(mm)	(mm²)	(kg/m)	Yield Load (kN)	Ultimate Load (kN)
26.5	31.76	6	540	4.52	513	583
32	38.87		872	6.55	829	942
36	41.88		1,037	8.27	985	1,120
40	45.89		1,278	10.18	1,214	1,380
47	55.03	8	1,787	14.00	1,697	1,929
50	57.23		1,955	15.82	1,858	2,112
57	65.25		2,634	20.51	2,502	2,844
65	70.25		3,109	26.62	2,953	3,357
75	80.26		4,177	35.37	3,968	4,511

Note: Yield loads and ultimate loads are unfactored.

Dextra CR Bar 1080 systems in action

Typical applications for temporary or permanent applications:

- Pre-tensioning or post-tensioning of concrete structures
- Temporary bracing / temporary post-tensioning
- Heavy lifting or hangers (i.e. precast segments / beams).
- Launching gantries assembly
- Structural steel frame ties
- Segment or girder connections (temporary or permanent stitching).
- Bridge segment continuity tendons.
- Seismic restrainer system
- Reinforced concrete pier foundations
- Concrete or Steel pylons
- Cofferdams
- Temporary or partial stressing
- Prestressed block and brick construction
- Pile testing
